

ALZHEIMER'S  ASSOCIATION®

CHRONIC STRESS, RACISM, AND ALZHEIMER'S:

Unraveling the Connections

VIRTUAL PROGRAM

WEDNESDAY, SEPTEMBER 20 | 6-7:30 p.m.

This session explores the intricate links between chronic stress, racism, and Alzheimer's disease. We will examine how chronic stress, rooted in experiences of racism, can impact cognitive health and neurodegeneration. Additionally, we'll discuss the social determinants of health that contribute to racial disparities in Alzheimer's disease within the African American community. The session will emphasize the importance of cultural resilience, community support, and culturally sensitive healthcare practices in addressing these issues. Overall, the session aims to inspire research, advocacy, and community-driven initiatives for equity and cognitive well-being.
